PROFESSIONAL SUMMARY

Embedded links: portfolio, reel, Linktree, and project titles

I do not believe I am naturally talented or gifted, but I do believe that if I keep trying, learning, and finding new ways to solve a problem, I will eventually crack it. That is how I approach life. As I have grown older, I have realized that life is not about asking why something is happening to me; it is about understanding what I can learn from it and how I can grow from it. That is why I connect so deeply with VFX and filmmaking. I want to create. I want to show people what is possible and remind them that the mind is the only real limit. VFX allows me to bring the impossible to life, and through film I can create worlds, emotions, and ideas that inspire people. I create because that is what I know how to do. I create because that is who I am.

TECHNICAL SKILLS

- Houdini particle simulation
- Water and cloth simulation
- Nuke compositing

- On-set VFX supervision
- Lighting for VFX plates
- Live-action/CG integration

SOFTWARE

Houdini | Autodesk Maya | Blender | Nuke | 3D Substance Painter | Adobe After Effects | Adobe Photoshop | Adobe Illustrator

HARDWARE

Alexa Mini camera | RED Raptors | RED Komodos | Blackmagic Pocket 6K | Sony A7 IV | HMI Lights (Joker) | Nanlite lights | Zoom Recorder Kit

PROGRAMMING

Python | HTML

WORK EXPERIENCE

Resurgence | VFX Supervisor / Producer

2025-2026

- Developed the original concept across a three-quarter pre-production, production, and post schedule, shaping a 10-13 minute sci-fi action short with roughly 80 VFX shots due in two months.
- Recruited and pitched to an 8-person VFX team, sound designers, and film crew; planned camera tests for tracking markers, marker removal, lens distortion grids, and 3D actor scans before production.
- Broke actor scan meshes into wrist, forearm, and upper-arm sections, then tracked live-action arm movement in Nuke with KeenTools GeoTracker using undistorted plates and tracking markers.
- Sent tracked meshes and 3D cameras into Maya, applied Substance Painter vein textures, rendered EXR passes with alpha channels, and composited heat distortion, lens dirt, motion blur, roto, redistortion, and final colorist handoff through a reusable Nuke script.

Gatorade Become Greatness | Director / Project Manager

2024-2025

- Directed a 30-second conceptual FIFA x Gatorade commercial in an LED volume, shaping performance, lighting, camera movement, live-action plates, and post-production requirements.
- Tested green screen versus LED-volume workflows, reviewed Unreal Engine environment performance, checked frame-rate latency, and planned color-space handling with EXR-based VFX delivery.
- Managed remote and in-person artists through picture lock, shot assignment, sound design, stadium atmosphere, music/foley, and troubleshooting across Nuke, Unreal Engine, Blender, and final plates.

Bird Murmuration | Houdini Particle + Water Simulation

2024-2025

- Pitched the concept to VFX artists and collaborated through multiple Houdini iterations to refine flocking patterns, water simulation, atmospheric staging, and shot composition.
- Managed heavy simulation/cache demands, including large water-sim cache transfers, while shaping a happy-accident murmuration pattern that briefly read as a giant bird in flight.
- Modeled and textured boat elements, used Houdini terrain tools for peaks and valleys, and rendered the final scene in Karma.

RoboButler | 3D Modeler / Compositor / Animator

2022-2023

- Shot a short live-action film under five minutes and modeled the robot in Blender, building an early full CG-to-plate integration workflow.
- Textured the character in Substance Painter and composited body, shadow, and contact-shadow render passes in After Effects.
- Used the project to establish a repeatable model, texture, render-pass, and composite workflow that influenced later live-action/CG work.

Underworld | Maya Volumetric Fog

2023-2024

- Built a stylized city environment in Maya using plugin-based city geometry, then optimized the selected location radius for the shot.
- Added volumetric fog, lighting, and a 3D-scanned object scaled into a giant parallel-dimension creature to create atmosphere and story scale.
- Used scale contrast, fog density, and lighting placement to sell the idea of a normal city being interrupted by a larger impossible world.

SCADBound | Leader / Orientation Assistant

2023-2026

- Organized events and hosted meetups with other SCADBound leaders, supporting new students and families through campus transition programming.
- Led hour-long tours for groups of 30+ students and families, strengthening public communication, group leadership, and event coordination.
- Built confidence speaking to large groups while keeping information clear, welcoming, and organized under live event conditions.

Intramurals & Recreation | Assistant

2024-2026

- Created social media and content support for teams and individual players, helping promote student athletics and recreation programming.
- Refereed games across tennis, basketball, soccer, badminton, table tennis, and pickleball while supporting meetup tables to recruit new players.
- Helped connect students with sports programs through in-person outreach, team promotion, and content ideas built around participation.

EDUCATION

BFA, Visual Effects (STEM) | Savannah College of Art and Design, USA | 2022-2026

High School, Science | Carmel Senior Secondary School, India | 2019-2021
